

BSA 120: Mastering Business Analysis

This course explores advanced strategies for gathering, documenting and reviewing requirements for more effective business analysis and implementation. Supporting the latest BABOK® edition, this course includes added test-prep questions to help interested students prepare for the CBAP® or the CCBA® certification. Students explore advanced topics in quality management, testing, verification and validation. Other topics covered include advanced techniques for creative problem solving and advanced quality management to ensure project success.
