BSI 120: Mastering Data Management and Technology

Building upon the foundational concepts gained in Essentials of Business Intelligence, students will explore more advanced topics including data modeling, MDM, industry data standards, securing BI content, and reporting and performance management. With case studies and exercises, students gain real-world insight into all facets of business intelligence. Throughout the course, students gain the skills needed to create a business case for improving data quality, cost benefit analysis, impact and root causes.
